

SciRhom GmbH, based in IZB Martinsried, Germany, is a biotech start-up company that translates science into the preclinical and early clinical development of novel biopharmaceuticals for the treatment of life-threatening diseases. Founded in late 2016, SciRhom develops first-in-class antibodies against iRhom2, a key modulator of several crucial pro-inflammatory signaling pathways, including TNF-alpha signaling and is now pursuing the preclinical and early clinical development of these monoclonal antibodies for the treatment of autoimmune and other serious diseases. SciRhom is solidly financed and has secured about EUR 7m in seed funding.

To support our team/pre-clinical drug development in Martinsried near Munich, we are looking for suitable candidates for the following fulltime permanent position, to begin work as soon as possible:

## Senior Scientist / Director - Indication Development (m/f/d)

### Your Tasks

- Taking responsibility for pre-clinical-based indication development projects including project management
  - Plan, coordinate and execute projects in the field of indication development of novel therapeutics with highest quality and within given timelines and budget in order to meet milestones
  - Be the interface to internal (Management, technical assistants) and external stakeholders
  - Develop, plan and recommend budget, capital equipment, and staffing changes to accommodate an evolving, highly dynamic field as required
- Responsible for the planning and instruction for a group of technical assistants
- Staffing the team with appropriately credential technical and professional employees
- Prepare, summarize and review scientific presentations for executive management
- Work with management team, advisors and KOLs on short and long term strategic planning for the clinical positioning of existing and new drugs
- Work in close alignment and build strong relationship with our academic partners in New York
- Representation of scientific results as well as convincing and confident communication of the content to colleagues and business partners
- Planning, development, implementation and optimization of in vitro and in vivo experiments and studies highly focused on auto-immune diseases and immuno-oncology

- Execute a range of immunological experiments to advance multiple drug development project and scientific objectives in parallel
- Participate in the compilation of reports, INDs and IBs
- Review and provide crucial input to key indication development plans and reports
- Preparation and review of technical documents (e.g. protocols, reports, SOPs)
- Documentation according to industry standards

### Your Profile

- Post-graduate academic education in the bio/life sciences and ideally a minimum of 3 years` experience in the biopharmaceutical industry or a highly related field
- Strong background and profound knowledge in immunology/immuno-oncology is mandatory; experience in the area of drug development is advantageous
- Passion to deliver against timelines
- Ability to escalate project risks in a timely manner, elaborate alternative scenarios and strive for solutions
- Team player with strong motivation, interpersonal skills and excellent communication abilities which facilitate knowledge sharing and scientific discussions
- Hands-on mindset
- Motivation for and experience in directing and supervising technicians
- Must be detail oriented with excellent prioritization and organizational skills

### Your Prospect

- An exciting and challenging position in antibody drug development
- Working with a highly motivated and experienced team in a dynamic and international environment
- Taking over responsibilities in an innovative profession in an exciting industry
- An inspiring working atmosphere as fertile ground for further development
